Education

KIET Group Of Institutions, Ghaziabad

Bachelor of Technology in Computer Science and Engineering

November 2020 - July 2024

CGPA-7.8

Experience

Xcelore

April 2024 – Present

Full Stack Developer

Noida, India

- Developed end-to-end scalable Full-Stack Web Applications using Next.js, Node.js, React.js, TypeScript, JavaScript, MongoDB and PostgreSQL improving load time by 35% and enhancing user engagement through responsive interfaces by implementing lazy loading, code splitting, and efficient state management.
- Integrated RESTful APIs and WebSocket-based real-time features, enabling seamless data synchronization and interactive dashboards using highcharts — contributing to a 30% increase in platform responsiveness.
- Streamlined CI/CD workflows by managing GitLab repositories, optimizing Docker Containers, and leveraging AWS logs for proactive monitoring — reducing deployment issues by 40% and accelerating release cycles.
- Collaborated directly with clients to gather requirements, led implementation discussions, and drove scalable technical solutions and rapidly driving 95% on-time feature delivery and ensuring high client satisfaction.

Technical Skills

Languages TypeScript, JavaScript, SQL, NoSQL C++

Frontend React.js, Next.js, Redux, Context API, HTML, CSS, Tailwind, Shadcn, HighCharts

Backend Node.js, Express.js, REST APIs, WebSockets, PDFKit

Databases MongoDB, PostgreSQL, ClickHouse

Tools & Platforms Git, Docker, AWS, Postman, SFTP, Mongoose

Projects

Petwell

October 2025 – Present

Pet Wellness Automation Platform

- Designed a Node.js backend service to process CSV files uploaded via SFTP, transforming structured data into automated, user-specific PDF health reports, ensuring parsing, validation, and mapping of large datasets.
- Automated robust data processing pipelines with error handling and logging mechanisms to handle malformed or incomplete CSV or Excel files inputs, improving system reliability and reducing manual intervention.
- Designed a cron job service to continuously monitor the SFTP server for file uploads that handles asynchronous file ingestion, automating the end-to-end workflow from file parsing to PDF generation and email dispatch.
- Closely collaborated with backend and DevOps teams to securely fetch credentials using AWS Secrets Manager, monitored services via CloudWatch, and supported CI/CD deployments through AWS CodePipeline.

Pythag

Dec 2024 – September 2025

Cell Monitor SaaS Platform

- Designed and Refined, SaaS platform by using Next.js and TypeScript and Shadcn components, delivering a seamless UI/UX while maintaining 99.9% uptime and concurrent users with near-zero downtime in environments.
- Engineered real-time monitoring dashboards with Highcharts, integrated using WebSockets and REST APIs, enabling live data visualization with sub-100ms latency and improving user session engagement metrics by over 25%
- Led agile sprints with cross-functional developers and QA engineers using Atlassian Jira, conducting daily stand-ups which accelerated feature delivery by 30% and ensured sprint goals were consistently met.
- Conducted four-month performance tuning and refactoring initiatives that enhanced frontend responsiveness by 40%, decreased API failure rates by 60%, and ensured higher system reliability and scalability during peak traffic hours.

Xcelight

June 2024 – Dec 2024

Real-Time AI-Powered Video Analytics Platform

- Engineered an AI-powered video analytics platform that transformed raw CCTV footage into business insights using advanced vision algorithms and emotion detection, enabling real-time behavioral analytics.
- Defined highly responsive, real-time dashboards using Next.js, Chart.js, and WebSocket.io, resulting in a 50% reduction in latency and allowing users to monitor critical video streams and KPIs with instant feedback.
- Integrated the platform with enterprise business and backend APIs, enabling automated processing of video data, reducing manual intervention by 60% and accelerating decision-making based on AI-driven emotion insights.
- Collaborated with cross-functional teams to define data pipelines, ensuring scalable video data ingestion and processing for thousands of surveillance feeds concurrently and optimized resource utilization and system performance

CourseWork

Data Structure Analysis and Design of Algorithms, Object Oriented Programming and Database Management System
